

 Students are saying they do not get the posters. They do not know what it is all about and what you will you teach there.

It will be mostly just *Open Science* and *Reproducibility of data* with some *Project management* on top.

Say what?

Like how to make sure that other researchers can **find your data and code** and **reproduce your results**. Or how to easily **keep track of files** even across different projects and PCs.

Gucci AF

An added benefit is that this will allow you to **collaborate with people** much easier. I think this is a skill set that every student should have.

Lit. No CAP.

OK
